

Lights out running and factory automation

Tuesday 27th
March 2018 at
the AMRC KTC

In today's global markets, many businesses are under growing pressure to reduce costs. As some sectors start to experience skilled labour shortages, companies are increasingly looking for automation solutions.

Machining companies often have ambitions to run their plant unmanned overnight or into the weekend. Whilst the potential for increased output and reduced costs are clear, how realistic is it to run with the lights out?

Come to the AMRC Forum 'Lights out running and factory automation' on 27th March to hear the experiences of SMEs and large companies who have implemented these strategies as well as those who provide the technologies.

Speakers from:

- Rolls-Royce
- Produmax Ltd
- Geo Kingsbury Ltd
- ABB Group
- AMRC Process Monitoring and Control Group
